

## ASSET TRACKING

Our IoT and GPS tracking solutions requires no installation and can be hidden in any asset by the client in total secrecy. Monitoring is done by the client via a web dashboard and a mobile phone App. TSU Protect will take care of all the required device and back-end settings.

Recovery of stolen/missing assets are done via our sister companies TSU Protection Services, TSU International and AM Security Services.

### TSU Protect Bug

- The TSU Protect Bug is an application ready Sigfox enabled transceiver and is a smart sensor perfectly suited for asset tracking applications.
- The Bug provides connection to national and global network infrastructure for reliable and secure communications. This small device delivers tracking functionality to powered or non-powered assets.
- Powered through an internal battery, it allows standard autonomy up to 2 years depending on report frequency settings.

### TSU Protect Tracker

- The TSU Protect Tracker is an application ready Sigfox enabled transceiver and is smart sensor perfectly suited for asset tracking applications.
- The Tracker provides connection to national and global network infrastructure for reliable and secure communications. This rugged sensor device delivers tracking functionality to powered or non-powered assets.
- Powered through an internal battery, it allows standard autonomy up to 10 years, depending on report frequency settings.
