

TSU PROTECT OVERVIEW

BENEFITS OF TSU PROTECT

TSU Protect is a reliable and robust personal safety app designed to keep employees safe while commuting, working alone, or on the job.

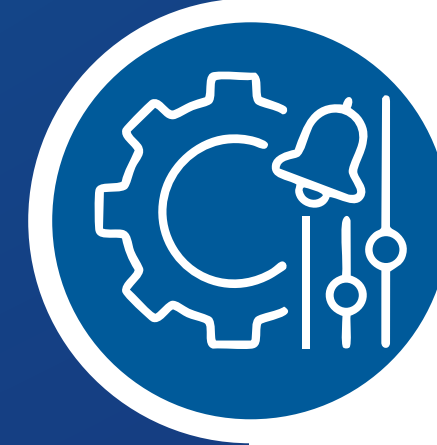

With 24/7 monitoring and simple, affordable features, TSU Protect allows employees quickly raise alerts and get help in emergencies anytime, anywhere.

For employers, the app offers powerful tools for better workforce management and faster communication, making it a valuable solution for both employee safety and operational efficiency.

24/7 Monitoring & Armed Response

Once an alert is triggered on TSU Protect, the user's location and the visual & audio evidence captured via the user's device is instantly sent to our monitoring centre to assess. If necessary, a rapid armed response is sent to the location to provide assistance. This ensures that your employees receive the help they need, quickly and efficiently, no matter the time of day.

Customisable App Features

TSU Protect offers a wide range of features that can be customised to suit your organisation's specific needs. You can select which app features to grant your employees access to, tailoring the solution for optimal safety and functionality.

Tracks Live Location

TSU Protect provides your organisation with real-time visibility of your employees' whereabouts. This ensures that your organisation is always kept informed and can respond quickly if needed.

Provides Proactive Safety Measures

TSU Protect allows your organisation to send bulk push notifications to alert groups of employees of potential dangers or check on their safety. Geofencing features also allow you to warn employees if they enter a potentially dangerous areas.

HOW TSU PROTECT WORKS

Alerts can be raised in several ways either from the smartphone itself or using optional wearable devices. When an alert is raised the following happens:

1
An alert is raised by the user

2
TSU Protect notifies users emergency contacts and 24/7 monitoring centre with GPS location

3
TSU Protect sends live audio and video captured from the user's device to emergency contacts and 24/7 monitoring centre

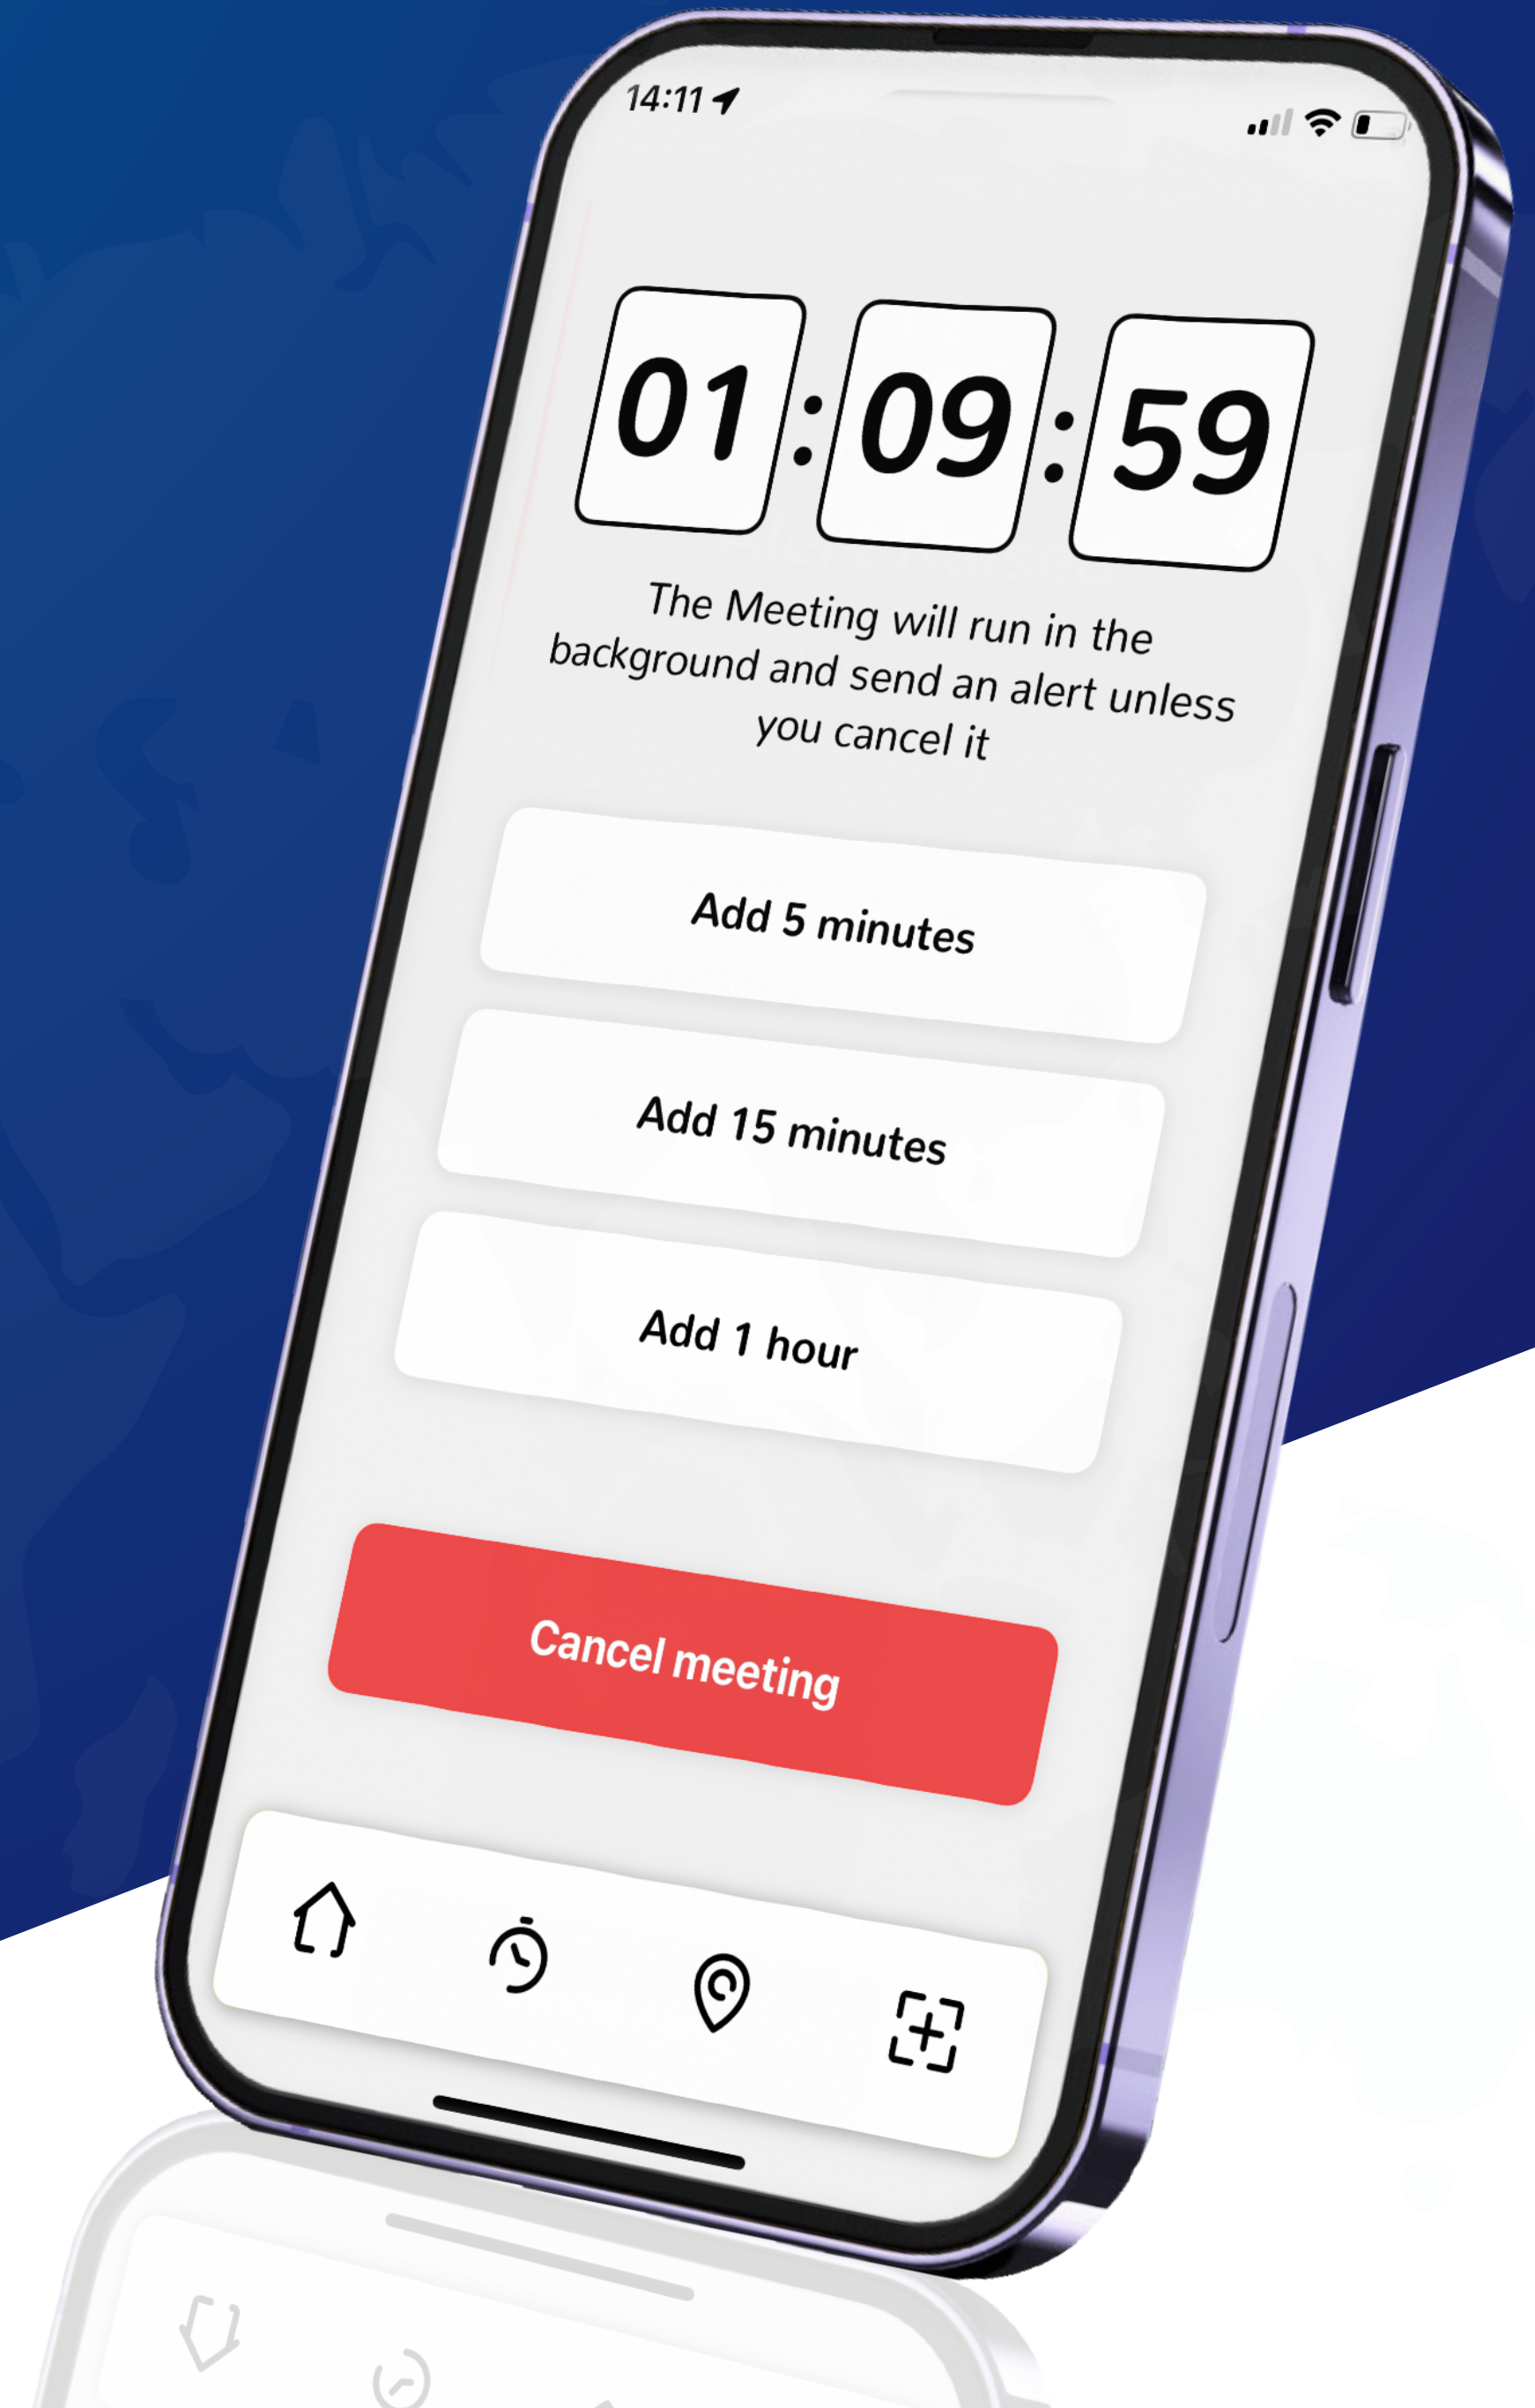

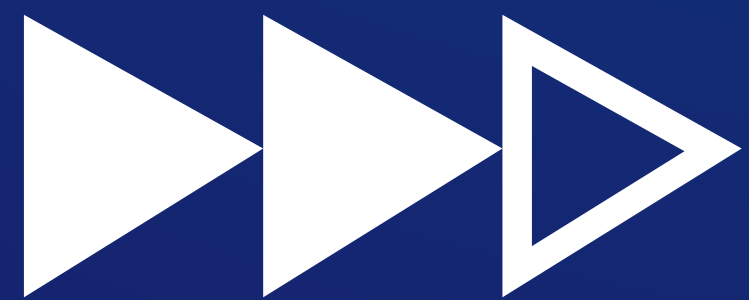

4
24/7 monitoring centre calls through to the user to check on their safety

5
If required an armed response is sent to the user's location immediately

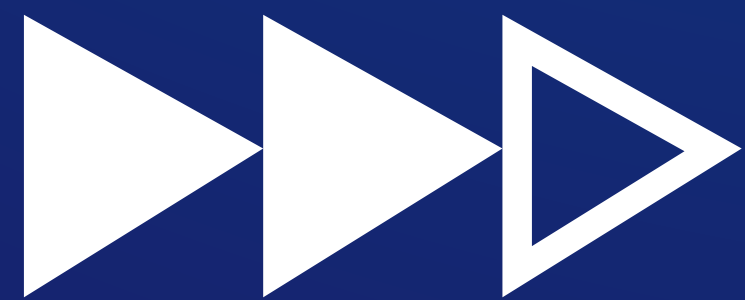

MEETING TIMER

Employees can set a timer when attending a meeting in an unfamiliar location or performing a risky task. Once the timer expires, an alert is automatically triggered.

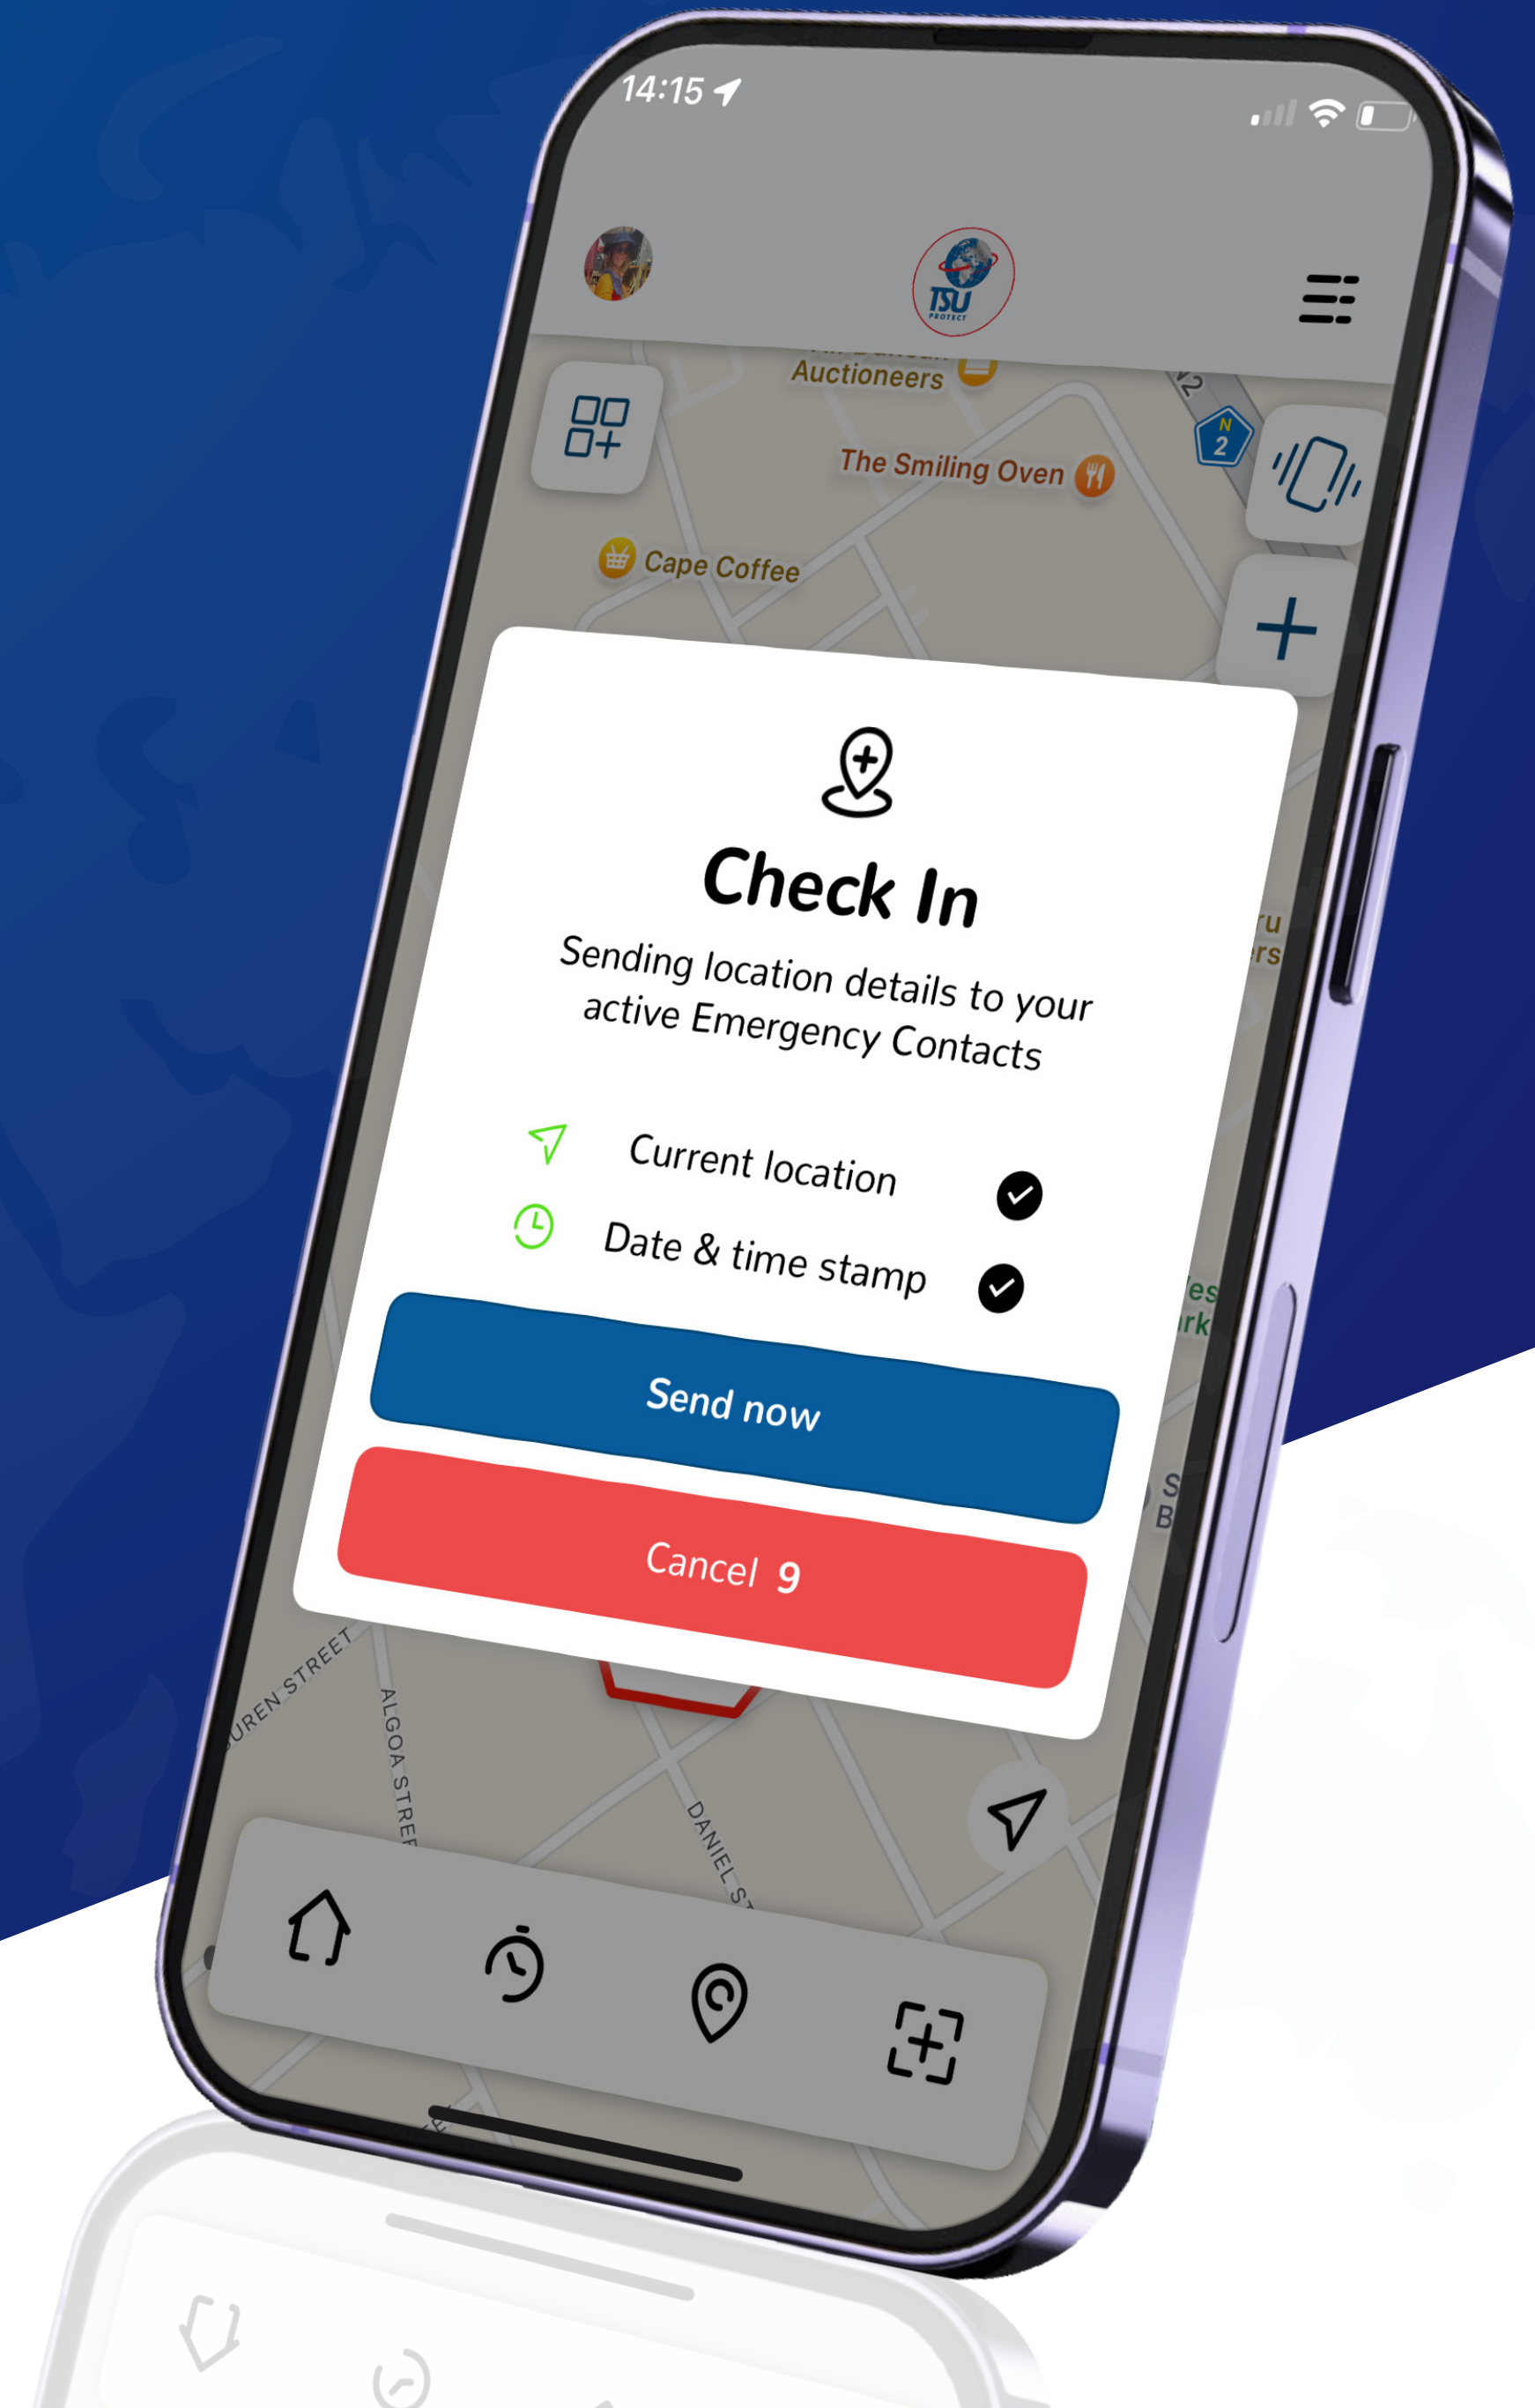

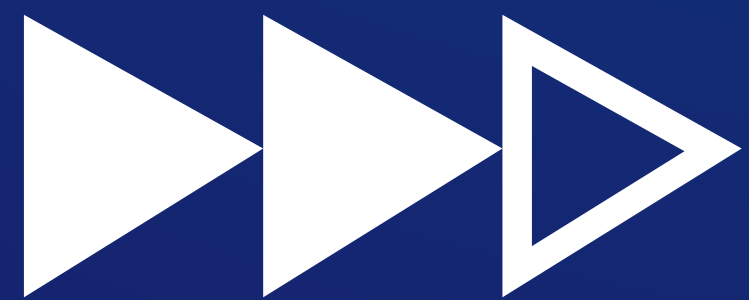

MASS NOTIFICATIONS

Members of staff with admin privileges can send notifications to all employees or selected employees through the app within the TSU protect dashboard.

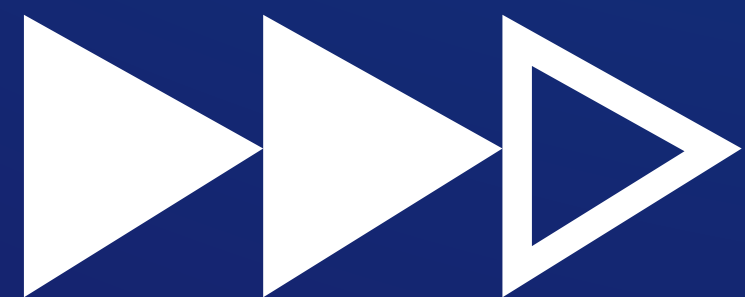

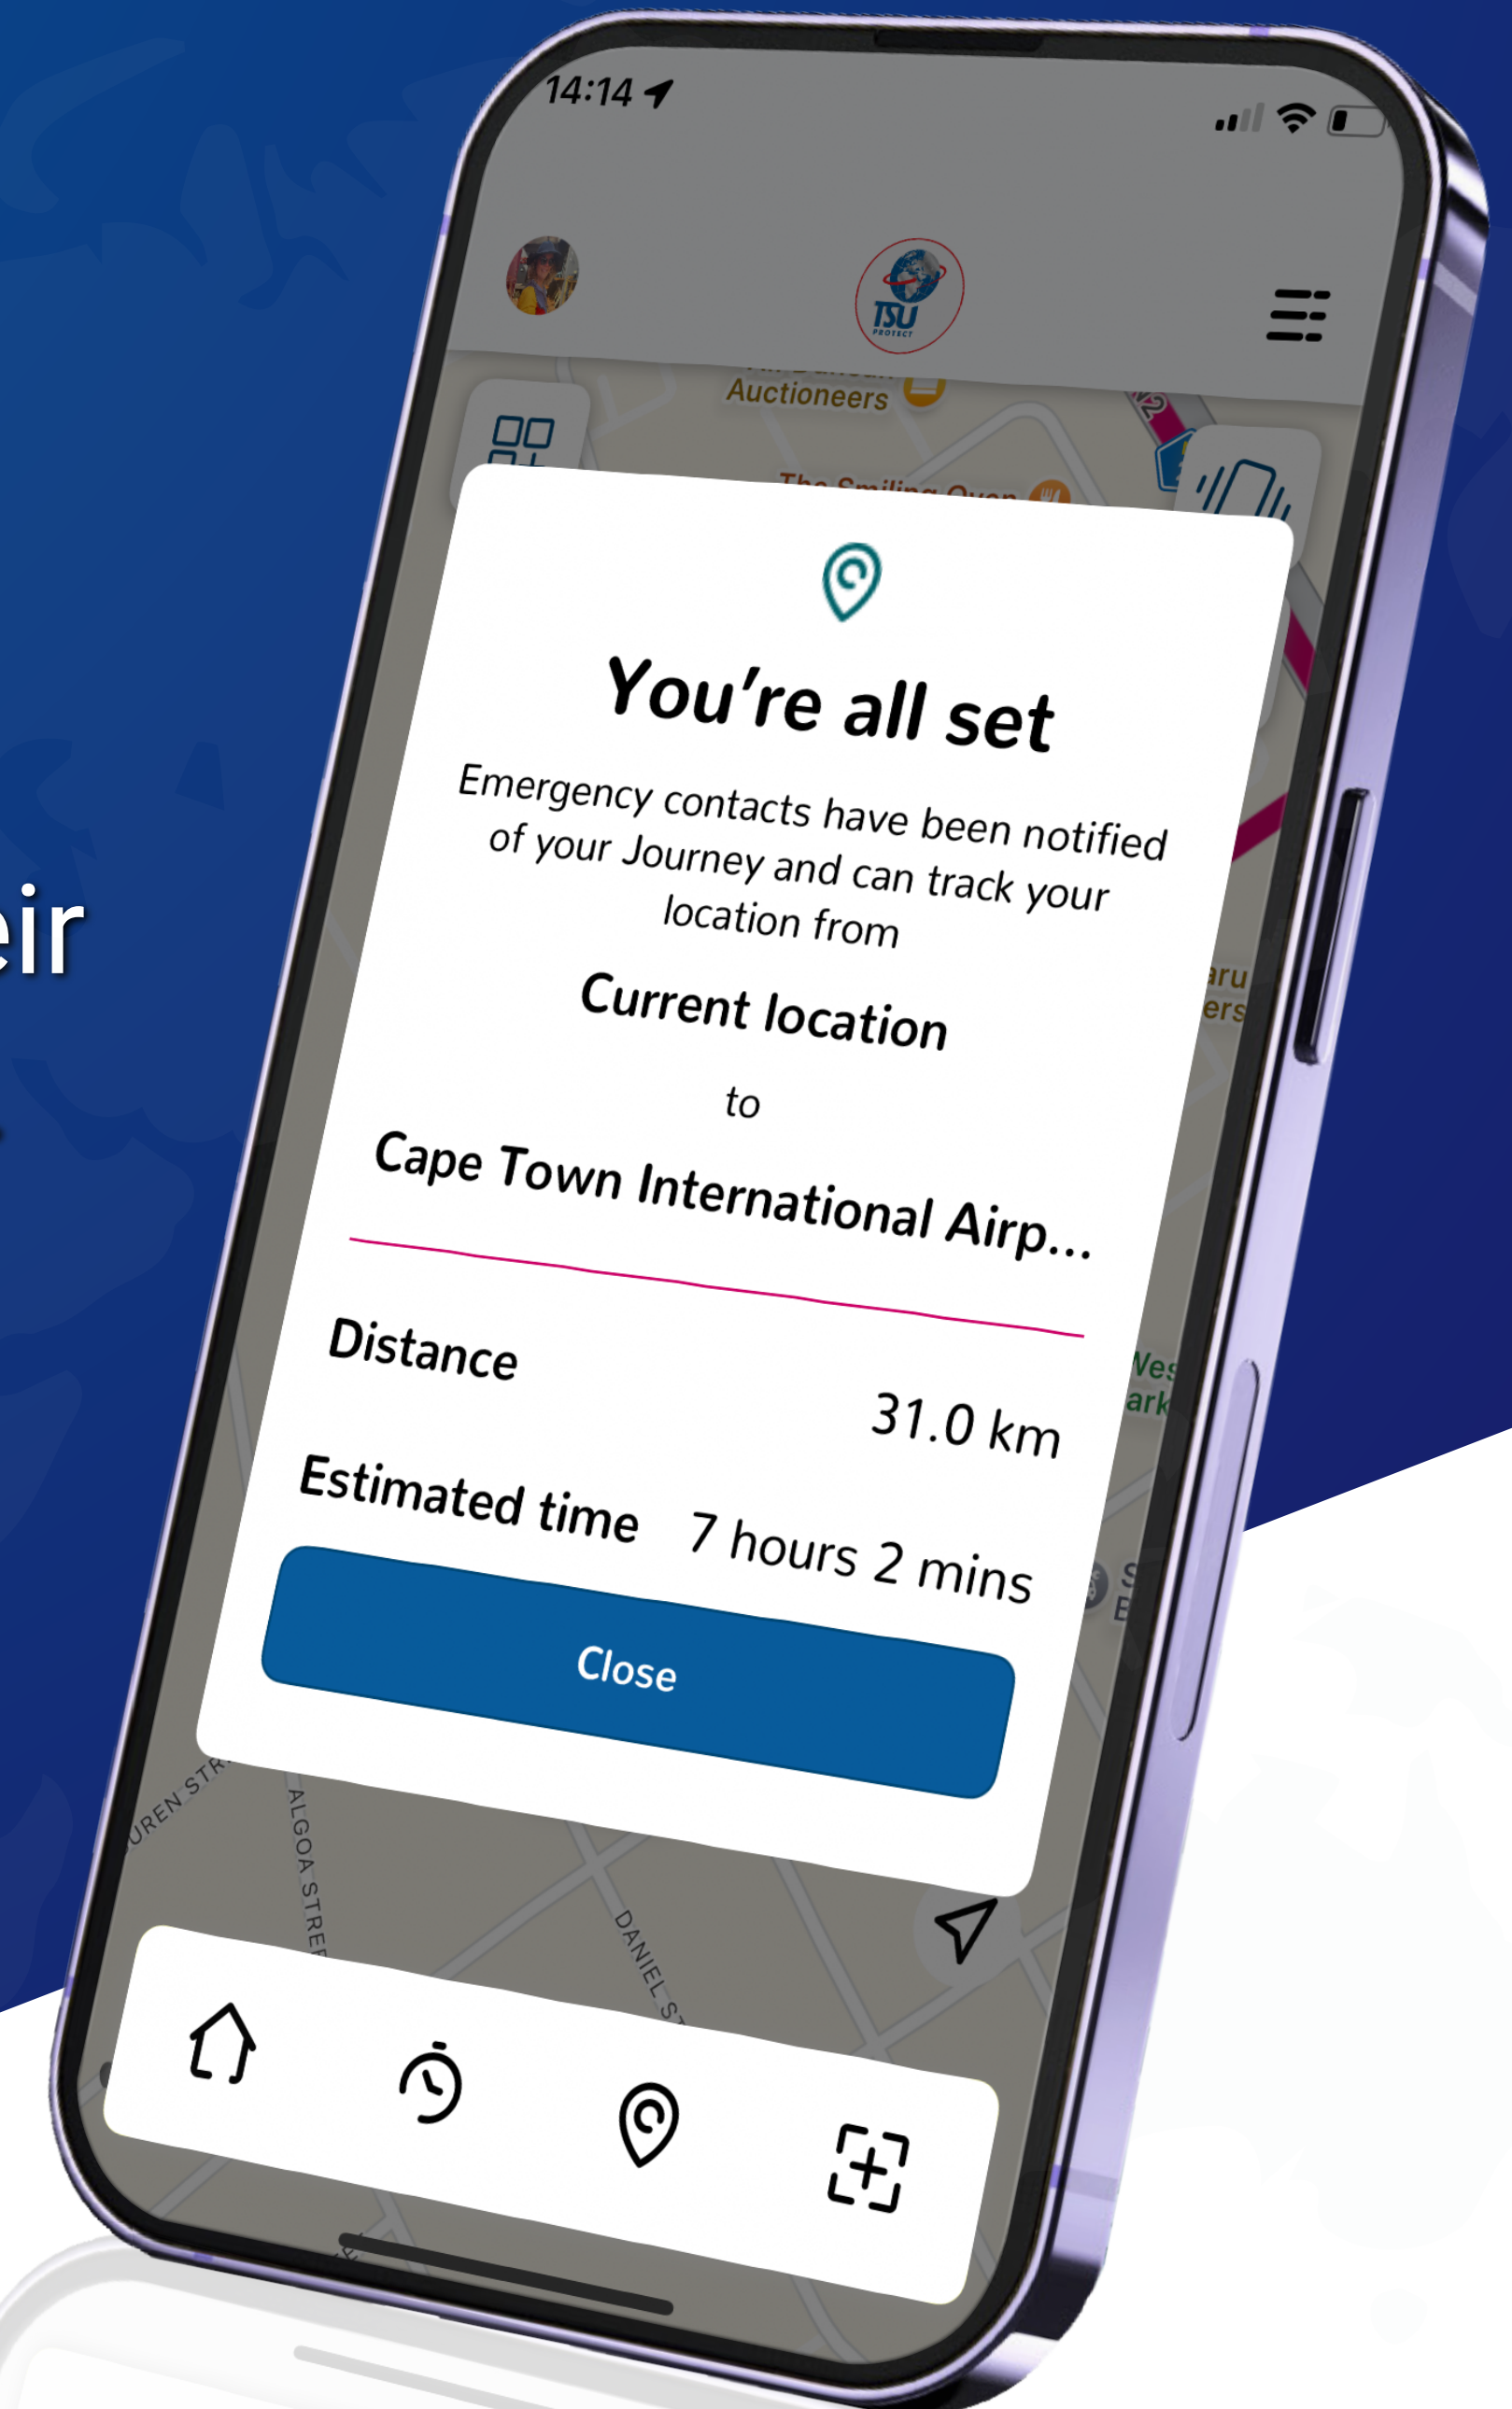

CHECK IN

The check-in feature enables employees to quickly touch base with their organisation via a real-time prompt, so employees can indicate if they are safe or need assistance.

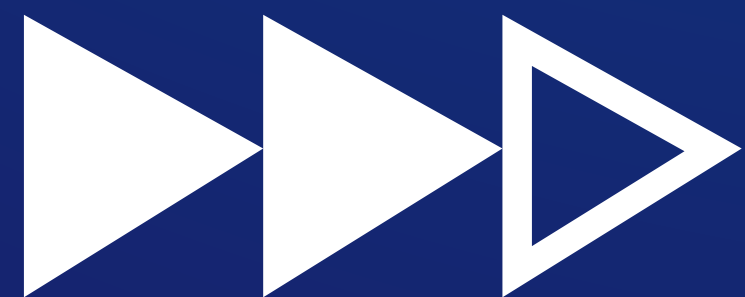

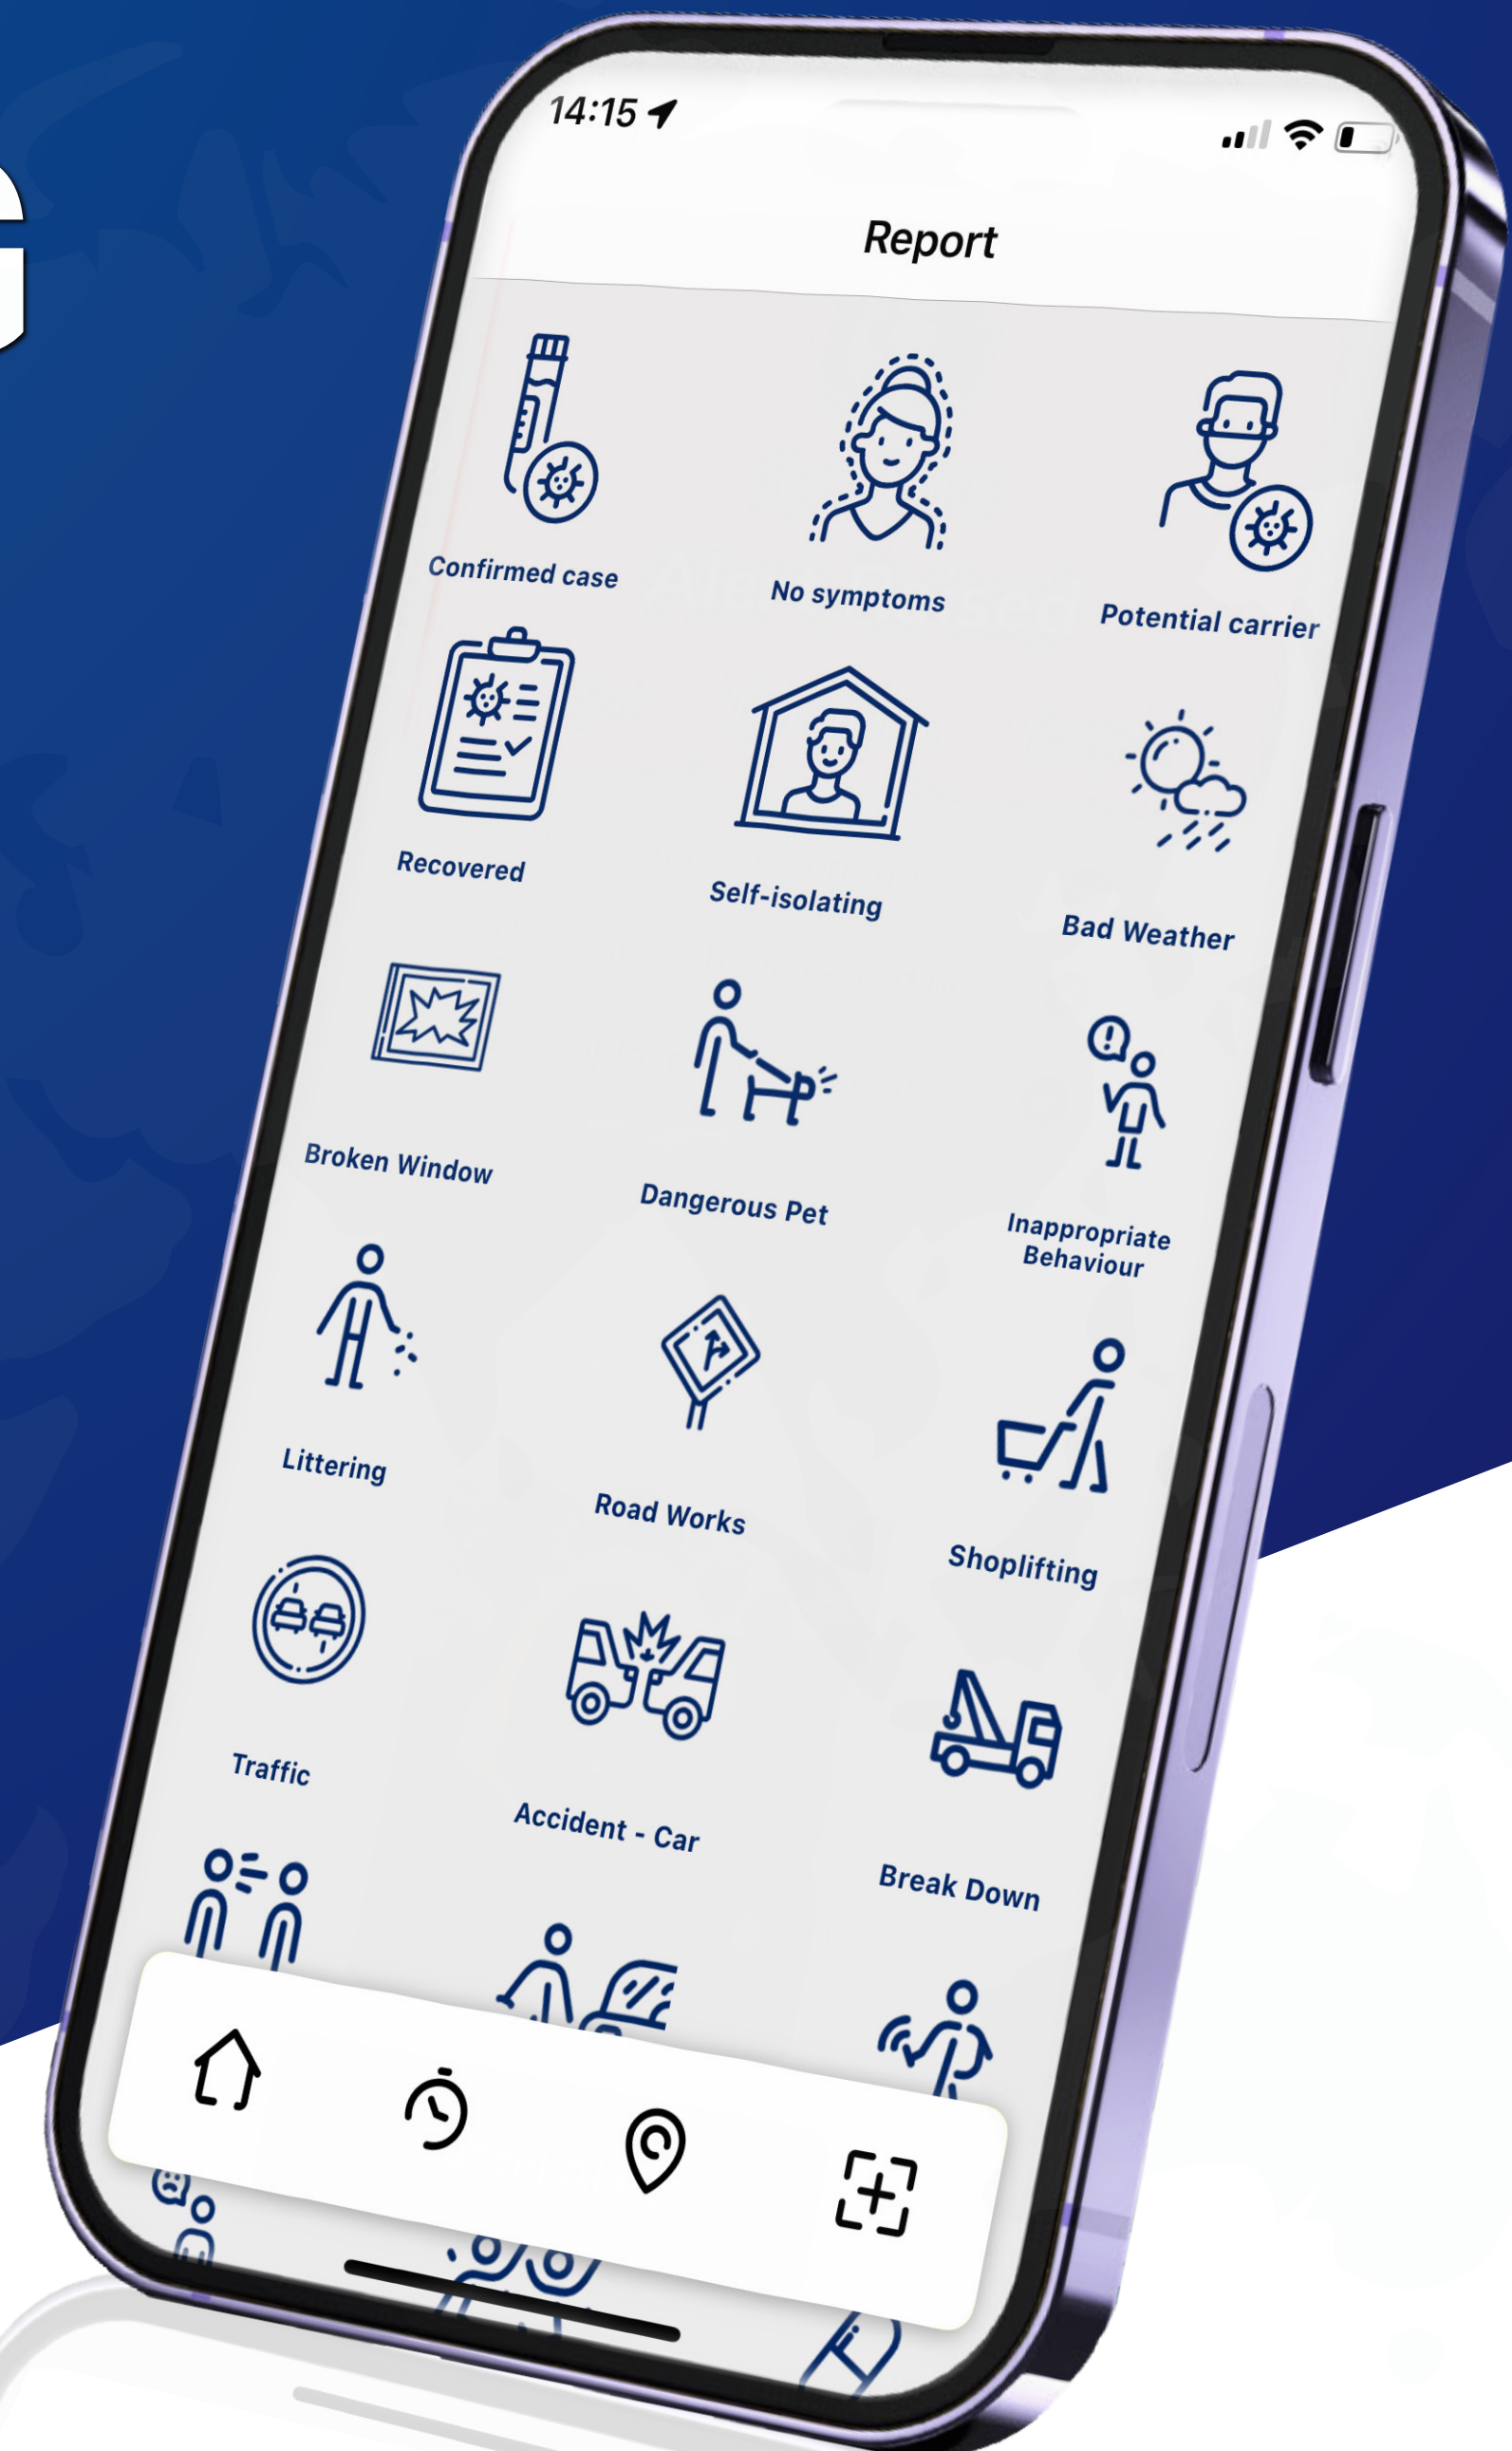

JOURNEY TIMER

Employees can map their route from point A to point B and notify emergency contacts about their journey, allowing for real-time tracking if needed. A timer can be set for the trip, triggering an alert automatically if they do not reach their destination before the timer expires.

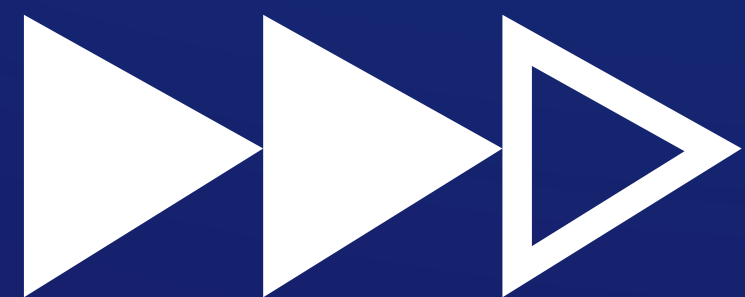

INCIDENT REPORTING

The incident reporting feature allows employees to report workplace issues such as trip hazards, aggressive behaviour, or bullying etc. These reports are automatically escalated to the appropriate teams within the organisation for prompt action.

24/7 MONITORING

TSU Protect offers 24/7 monitoring of alerts, ensuring that your employees receive the help they need at any time of the day. The monitoring centre calls the user whilst assessing audio and video footage from the alert and can provide an armed response to the user's location if necessary.

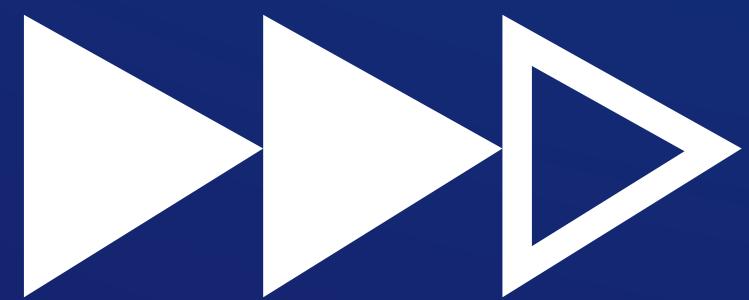

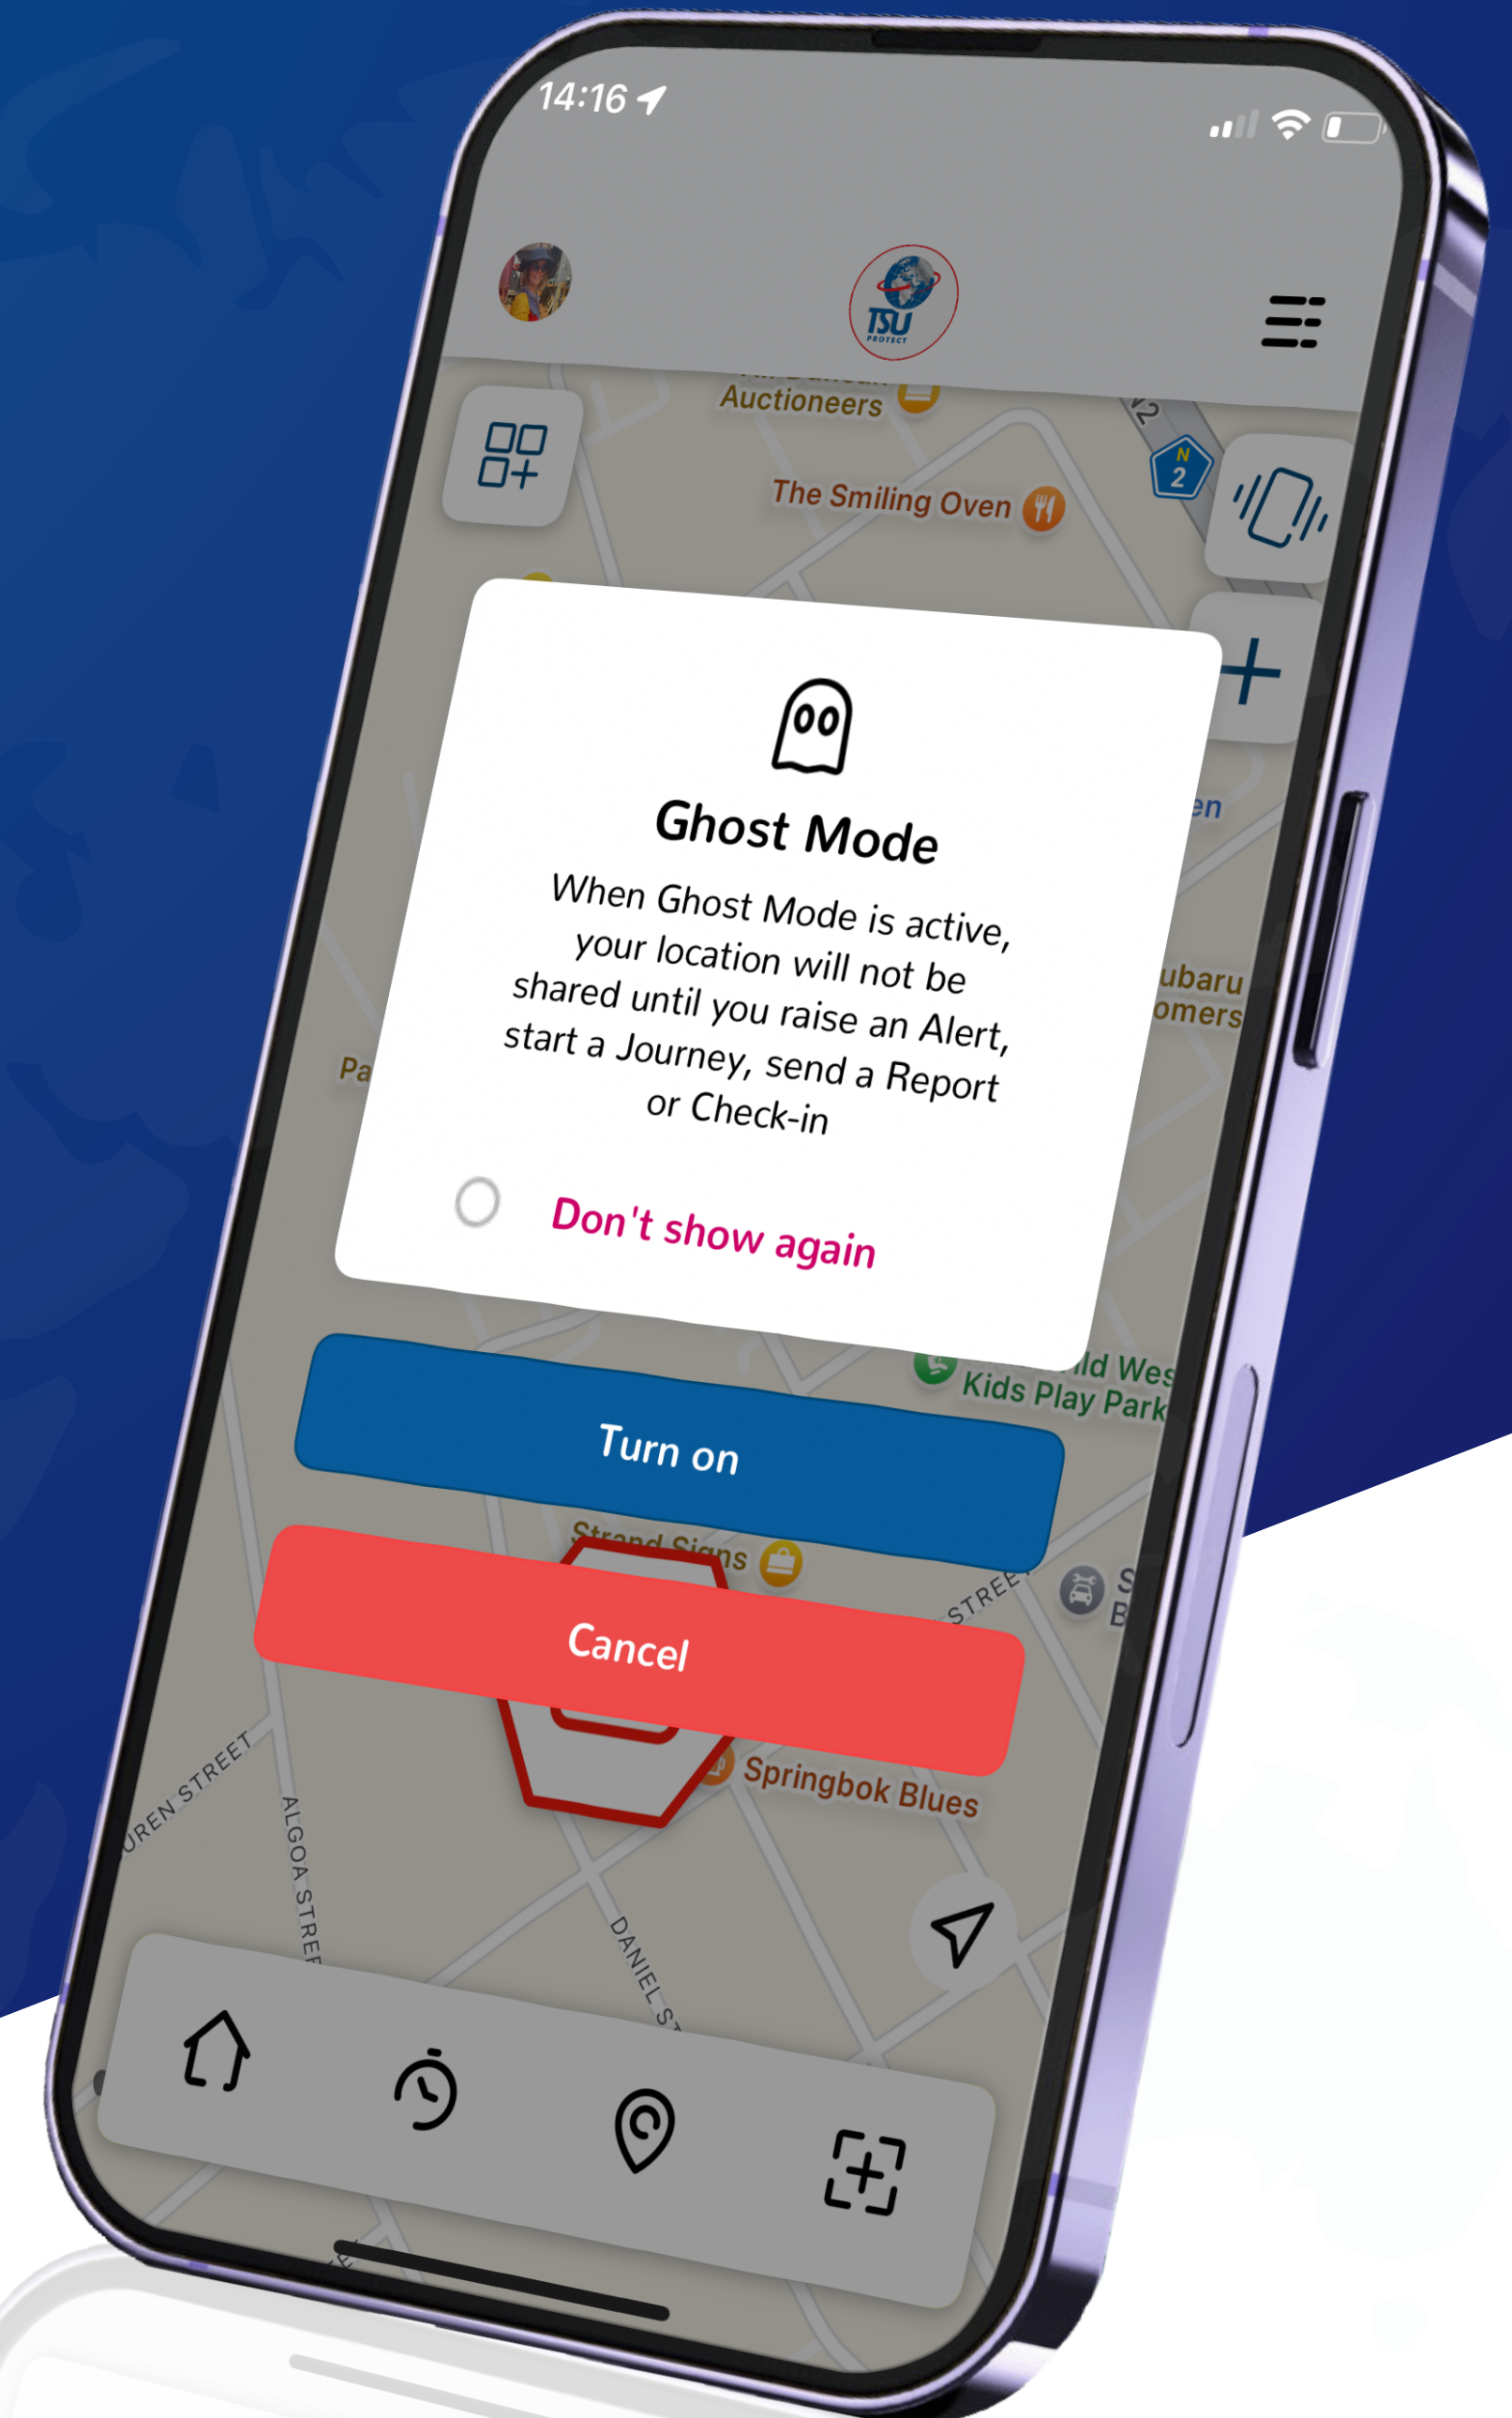

MAN DOWN

TSU Protect is equipped with man-down capabilities that automatically trigger an alert if the phone detects a fall from a certain height, or sudden impact.

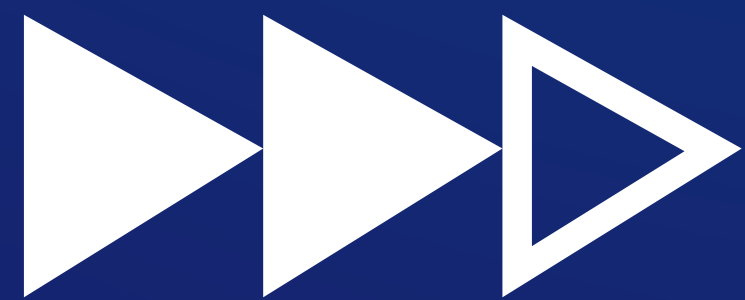

GHOST MODE

TSU Protect allows employees to hide their location from their organisation if privacy is a concern. However, the location is automatically revealed if an alert is raised.

GEOFENCING

Staff members with admin privileges can create geofenced boundaries around dangerous areas, instantly notifying employees of potential danger if they enter these zones.
